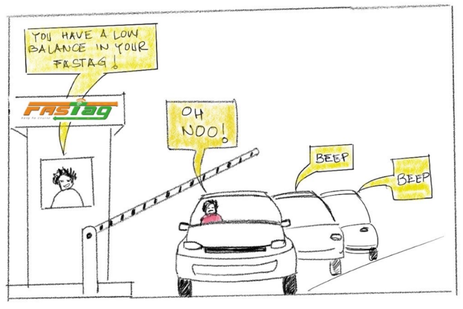
scenario 2:

dinesh, an avid road tripper and driving enthusiast, is on a long drive but encounters a number of stumbling blocks.

(note: fastag is an electronic toll collection system in india, like e-zpass in north america.)

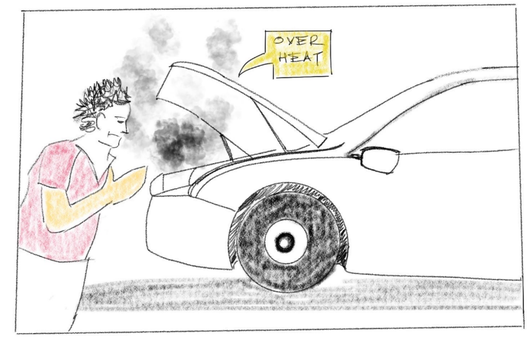


Dinesh is on a long drive.
About 40km into the journey, he encounters a toll booth and is informed that his FASTag is out of balance.

He has to scramble to refill FASTag on his phone with his slow 3G connection, while he inconveniences other drivers behind him and they honk and swear at him.

After another 100km of driving, he gets a flat tire due to low tire pressure.

He has to spend 45 minutes changing his tire under the hot summer sun.



After another 200km of driving, his engine overheats as he forgot to change the oil.

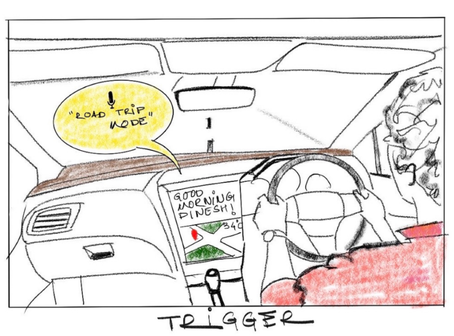
He then has to call professionals for help. This wastes another two hours and thirty minutes.

Dinesh ends up reaching Bangalore 4 hours later than expected and misses his sister's wedding party.

A dismayed Dinesh apologizes to his sister.

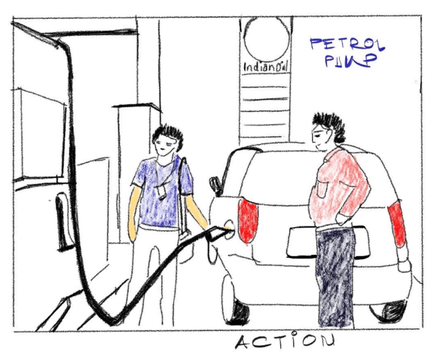
dinesh's journey before saathi

how our voice-controlled dashboard, saathi, makes dinesh's road trip smooth, safe, and hurdle-free:

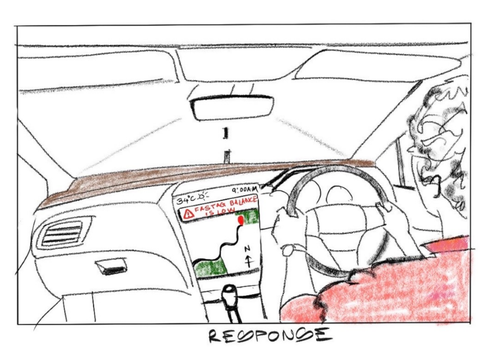


Dinesh is on a long drive.
Before beginning to drive, he tells his car, "Hi Saathi, it's Dinesh. Let's go on a road trip".
Saathi says, "Hi, Dinesh. Ok, selecting road trip mode. Here's my status," and provides its status accordingly.

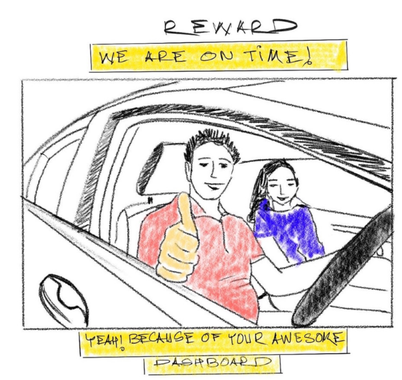
Saathi informs him that his FASTag balance is low, his tire pressure is low, and he needs to check his engine oil.



Dinesh then takes his car to a nearby petrol pump, gets his tires checked, and gets his engine oil changed.



He also quickly refills his FASTag balance using his dashboard touch screen. Thanks to his dashboard's inbuilt road trip and safety features, he is now all set.



He arrives perfectly on time for his sister's wedding.
